Fourier-Mukai transform - Wikipedia In algebraic geometry, a Fourier-Mukai transform \hat{K} is a functor between derived categories of coherent sheaves $D(X) \hat{\rightarrow} D(Y)$ for schemes X and Y , which is, in a sense, an integral transform along a kernel object $K \hat{\in} D(X \times Y)$. The Fourier-Mukai transform in algebraic geometry gets its name because it at least superficially resembles the classical Fourier transform. (And of course because it was studied by Mukai.) Let me give a rough picture of the Fourier-Mukai transform and how it resembles the classical situation.

Fourier-Mukai transforms for quotient varieties ... A Fourier-Mukai (FM) transform is an exact equivalence $\hat{K}: D(Y) \rightarrow D(X)$ between the bounded derived categories of coherent sheaves on two smooth projective varieties X and Y . The Fourier-Mukai transform $\hat{K}: E$ with Fourier-Mukai kernel E is the composition p . Fourier-Mukai transform on abelian surfaces | SpringerLink We study moduli spaces of stable sheaves on abelian surfaces whose Mukai vectors are related by a cohomological Fourier-Mukai transform. We show that there is a Fourier-Mukai transform inducing a birational map between them.

Fourier-Mukai transforms and Bridgeland stability ... FMTs and stability conditions on abelian threefolds in the literature) of the heart of the stability condition. In this paper we use Fourier-Mukai. Fourier-Mukai duality for K3 surfaces via Bridgeland ... Fourier-Mukai duality is a duality between a variety X and a moduli space of stable sheaves on X , which is a generalization of the duality between an abelian variety X and its dual abelian variety $\text{Pic}^0(X)$. In this article, we shall explain Fourier-Mukai duality for a K3 surface by using Bridgeland stability condition.
